Personal statement

In 2016, I began my coding journey when I realized there wasn't a proper music bot for our Discord server. This led me to discover and improve my skills in JavaScript, as I was working on creating a bot. Initially, it was just a simple music bot, but since most people on the server were my classmates from school, they kept requesting features, saying, "Add this, add that." Over time, the bot grew unnecessarily large. At first, we only shared the bot within our friend group, but after a long story, in early 2017, I ended up submitting the bot to what is now known as top.gg, like many bot developers in the Discord community did back then. After it got verified, I decided to create a website for the bot, as having a website for bots was a popular trend at the time. To do this, I needed to build a website, and during my research, I learned that JavaScript could also be used in web development. However, since JavaScript alone wasn't enough, I started learning HTML and CSS.

Unfortunately, I wasn't satisfied with the designs I created, and the way HTML worked felt clunky. Every website I built looked like Wikipedia, which led me to search for alternatives. That's when I discovered React and started using it to build websites. In fact, if the source code still existed, I could probably prove that the Discord bot website I made in the summer of 2017 might have been one of the first React-based websites in Turkey.

Sadly, my early projects, including my Discord bot, were lost due to a combination of factors. First, I spent countless nights playing League of Legends, which led to my grades dropping. As a result, my mom smashed my computer, which contained tons of code and information. Between 2019 and 2023, I fell into depression. I deleted all my data from the internet, broke my phone, canceled my phone line, and spent four years wasting my time watching TV and eating junk food. Because of this, I lost all my old projects and failed to get into a good university.

Since 2024, I've been actively sharing my projects on GitHub, showcasing my growth and expertise in modern web technologies. I may not have a university degree, but I'm really good at coding—why, I don't know, but I think I'm good at it.

Education

Associate's Degree : Computer Science Candidate, Expected graduation DEPERACTED
Gaziosmanpaşa Üniversitesi (Gaziosmanpasa Universi) - Tokat, Turkey

Associate's Degree : web-based-coding Candidate, Expected graduation October 2026
Anadolu Üniversitesi Açıköğretim Sistemi - remote

- **As much as I can write my skills**
- Version control (Git, GitHub)
- Database management (MariaDB, JSON, MongoDB)
- Continuous Integration/Continuous Deployment (CI/CD)
- Problem-solving
- Know how to use hyper-v and docker
- Front-end development (React, Material UI)
- Version control (Git, GitHub)
- Back-end development (.NET, fastapi, express.js)
- Strong know cloudpanel and phpmyadmin

Certifications

- **Full-Stack Engineer Career Path (Codecademy)**
- **Learn Advanced React Course (Codecademy)**
- **Data Scientist: Machine Learning Career Path (Codecademy)**
- **Learn Advanced Java Course (Codecademy)**
- **Code Foundations Skill Path (Codecademy)**
- **Learn ASP.NET Course (Codecademy)**
- **Learn Advanced Python 3 Course (Codecademy)**
- **Learn CSS: Responsive Design Course (Codecademy)**
- **Develop application with Flutter (Google)**

Languages

Turkish
Native
Thats my country's language
English
Intermediate (B1)
The codes are in English and World of Warcraft is also in English thanks to them.
